 **vinylit**
FACADESYSTEMS

A unique facade.

Vinylit protects house and environment.

- ≡ Made from recycled/recyclable PVC*
- ≡ Durable and free of pollutants
- ≡ Extreme robust and maintenance free
- ≡ Insulating and energy-efficient
- ≡ Easy-care and environmentally-friendly
- ≡ Noise and sound-insulating properties

* Except for vinyBrick

The first impression counts.

Individual facades –
as the people living in it.

We are innovation drivers for plastic facades- the facade system of the future.

Our credo: Plastic is one of the most valuable raw materials we have in abundance which should be used meaningfully. Use the value chain- that's Vinylit.

Feel comfortable and safe with your facade and also make a contribution to the environment- that's Vinylit.

Innovative and individual.

The sustainability of the material, the lasting, appealing effect and the ecological benefit of Vinylit facade systems delight house owners and craftsmen alike. The systems can be combined and emphasize the features where they are clearly visible - in the entrance area, at dormers and in gables.

Everything from a single source.

Profiles, fixings, window and door reveals - the complete system. This ensures a smooth and fast installation.

Durable.

Our products are recyclable and manufactured with recycled PVC. The final material obtained is significantly more resistant than traditional materials. It owes a high degree of hardness, is almost indestructible, heat- and colour resistant.

Ecological.

The granules and plastics used in our factories are made of recycled materials. Moreover, we have our own internal recycling system, all our wastage is reintegrated into our production system. The waste rate discarded by our company is below 1%. Moreover, no pollutant is used in our production process. We want to keep the environment safe.

Optimal insulation on a common residential building reduces energy consumption and CO² emissions by up to 50%. Furthermore, each piece of cladding can be removed and recycled to respect the environment as much.

Easy-care.

Regularly painting your facade belongs to the past. Dirt can easily be removed with a high-pressure jet. Our claddings react flexible to outdoor temperatures which avoids the appearance of cracks.

Inspiring.

Personalize your home with the different structures and colours available. Whether on new or old houses, Vinylit gives a new look to your building. Unit facade was yesterday. Let your imagination run wild!

The principle.

Rainscreen facades.

There is no protection more sustainable against weather conditions, moist masonry or mould. Rainscreen facades are not directly installed on the external wall, but on battens as substructure. Air, discharging moisture and even drying moist walls, continuously circulates through the space on the backside of the profiles. The laying technique is uncomplicated. Vinylit facade systems are installed by facade builders, roofers or carpenters in a very short time - with a dry jointing technique and almost no noise and dirt. The facade systems are installed using screws so that, in case of any dismantling, all materials can be separated from one another without any problems and recycled in an environmentally-friendly manner or disposed of accordingly. Depending on the wall structure and strength of the insulating elements a U-value of up to 0.160 can be reached. Furthermore, external noise can be reduced up to 11 decibel.

- 1 *Masonry*
- 2 *Substructure*
- 3 *High-performance insulation material*
- 4 *Vinylit facade profile of your choice*

Never paint again.

Render and wood was yesterday.

Rainscreen cladding systems made of plastic are economic. The care for insulated render is very high. Vinylit facade systems do not need regular new coats of paint. There are also no expenses for the removal of mould or patching up of damaged render. And above all, no extra expenses for the disposal* in the case of a future facade renovation.

You are investing in your future- that's Vinylit.

Design possibilities.

Combine & accentuate.

Design section

Individual parts of the building can be accentuated with different colours or finishing touches.

Select window reveal and roof edge profile

For each facade profile there are window reveals and fascia board profiles matching in shape and colour.

Play with colours

Select surface textures

Whether stone, render, wood or brick texture. Our offer meets all requirements.

Combine laying techniques

The difference is in the laying technique. Diagonal, vertical, horizontal or maybe even combined.

Extra wide Multi“talent“.

Looks like tiles. Tiles in plaster texture.

vinylit **Multipaneel**

vinylit **Multipaneel** plaster texture

vinylit Multipaneels are made of high-quality plastics in an environmentally friendly manner and finished with a UV-stable surface, which makes our facades particularly color-stable. The outer layer is extremely resistant to weathering and extremely durable. While traditional rendered facades have to be repainted regularly, vinylit Multipaneel profiles are fully-maintenance-free. The principle behind the ventilated facade prevents damp walls and mold growth. The facade profiles are available in assembly and transport-friendly lengths of 2.40 m.

Timeless natural stone surface.
Looks like render. As natural as render.

vinyTherm

vinyTherm natural stone texture

Increase the value of your property.

The vinyTherm profiles coated with high-quality natural stone granules are weatherproof, easy-care and extremely durable. The ventilated facade- in combination with insulation- ensures an excellent energy balance and prevents damp walls and mold. The profiles are available in several variations, structures and in up to 16 decors. Profiles with bevel edge convey the appearance of a closed render surface. Furthermore, profiles with bevel edge laid horizontally or vertically, allow, for example, the highlighting of gables and entrance areas.

Stone on stone.

Beautiful as stone. Coated with stone.

vinyStone

vinyStone natural stone texture

Give your house a valuable cladding!

vinyStone profiles are coated with a high-quality natural stone granulate. Surface texture and T-joint give the impression of a wall built with natural stones. The ventilated facade gives your house the perfect weather protection, heat-insulated and sound-proofed protection. vinyStone is available in two versions, the classic vinyStone 400 and the modern vinyStone Design. The facade profiles are available in assembly and transport-friendly lengths of 1.20 m.

Combine different natural stone surfaces and decorative shades with one another. This will give your house an elegant appearance.

The economic alternative.

Graceful as wood. More efficient than wood.

vinyTop

vinyTop wood texture

vinyTop facade profiles made of high-quality plastics are UV-resistant and durable, resistant to decay and insect infestation. The profiles are usually installed horizontally. Profile contour and the embossed surface correspond to a traditional wooden shiplap structure. vinyTop is the economical solution for the cladding of house walls, garages and garden sheds. Thanks to the low weight, they are particularly suitable for an installation in locations that are difficult to access. With appropriated substructure, they are suitable for ventilated facades.

Sustainability from one source.

Facade profiles, complete and color matching system accessories and fixings. Vinylit facade systems can completely be recycled. This is our contribution to environmental protection.

Modeled on nature.

Durable than wood.

vinyPlus

vinyPlus wood texture

Easy to clean and sustainable.

vinyPlus profiles are made of 100% recycled plastic with a UV-resistant textured foil. They are completely free of softeners and toxins. vinyPlus is available in a round profile version and as a shiplap profile, offering all the design possibilities of natural wood. They are easy to maintain and clean and extremely colour-stable. Painstaking repaintings are now a thing of the past!

Thanks to the ventilated facade, the walls will remain permanently dry, warm in winter and cool in summer. The tongue and groove system can be assembled quickly and cleanly.

For roofs, windows and doors.
Textured as wood. The times of warping is long gone!

vinyPlus **DRP**

vinyPlus DRP (Roofline system)

Are you tired of paying for scaffolding and painters every few years?
You want to maintain the structure of wood even in areas which are difficult to access?

Never again painting over head.

vinyPlus fascia board profiles made of high-quality plastics with a UV-resistant textured foil for maximum durability, resistance to rot and insect infestation. Repainting is not necessary anymore. Combined with the vinyPlus shiplap our round profiles, they are particularly suitable for gables and roof edge area - as verge or eaves cladding, for a flat roof finish or even as a windbreaker. The roof edge profiles can also be used in the range of window and door reveals or as a base paneling.

Brick texture everywhere!

Impact-proof like brick. Much lighter than brick.

vinyBrick

vinyBrick brick texture

Decide upon a high insulation.

vinyBrick facade elements provide an excellent energy balance. With appropriate insulation, the rear ventilated facade transforms your house into an energy-efficient house. In addition, another advantage of the robust material made of polyester fiberglass is its lightweight. The elements do not require any maintenance and have a smooth painted surface. For the elements with a sanded stone coating, the so-called „Truestone“ effect can even be seen and felt. The elements are available in different colours and decors.

For windows and doors.

Compatible with all claddings.

vinyCom

vinyCom Reveal system

Do you think about giving your house a thick thermal insulation? But you want the existing windows and doors to fit harmoniously into the new facade?

Click and ready!

vinyCom window and door reveals are compatible with all standard claddings, regardless of whether it is made of fiber cement, HPL, natural stone or a thermal insulation composite system. vinyCom is therefore ideal for mixed facades. Window and door lintels are ventilated 100% thanks to the vinyCom lintel. This is especially important for a permanent exchange of air, especially in thermally insulated houses. Another effect is that moisture can not occur. In combination with a ventilated facade, the entire structure is permanently protected
